Lynn,

Attached is a set of files to support Interagency Science Discussion of the non-cancer IRIS assessment for Methanol.

Jeff Gift and Team MeOH have revised the draft assessment in response to external peer review.

Deliberative Process / Ex. 5

Deliberative Process / Ex. 5

The major revisions

include:

# Deliberative Process / Ex. 5

Please take some of the "changes" shown in the Redline version with a grain of salt ...

Things such as:

A 4-digit number receiving a comma (1000 to 1,000) is automatically marked as a change.

A citation that received an a or b at the end of the date ( 2006 to 2006c) is marked as a change.

Sometimes a whole paragraph (or a whole Figure or Table or Heading number or Equation) is repeated twice ... with no changes, but somehow is marked (by Word) as a change.

**Red is an "addition"**

**Gray strike-out is a "deletion"**

**Green is a "moved to" area, and green strike-out is a "moved from" area.**

The page breaks are often odd as well - - - breaking in the middle of a figure or table, etc.

Sometimes the Tables are all squished up on the right side of the page .... again, I don't know why Word does that for the "Compare" process.

I'd note the tremendous effort it has taken to reach this point in the assessment development. We've benefitted from the external peer review and public comments and also appreciate the excellent support of Ted Berner, Karen Hogan, Karen Hammerstrom, Norm Birchfield, Stan Barone and you as we've worked through a number of complex issues.

My special thanks to Jeff Giff, Paul Schlosser, Lisa Lowe, Connie Meacham, Debra Walsh, John Cowden and Reeder Sams as they've demonstrated their sustained commitment to develop an excellent IRIS assessment.

We'll look forward to any comments you may have and to the next steps in the review process.

John
